General Note: References to pages in this formulary rate are indicated as: (page#, line#, col.#)
References to data from FERC Form 1 are indicated as: #.#.x (page, line, column)

Note Letter													
A	The balances in Accounts 190, 281, 282 and 283, as adjusted by any amounts related to FASB 158 or 109. Balance of Account 255 is reduced by prior flow throughs and excluded if the utility chose to utilize amortization of tax credits against taxable income as discussed in Note F. Account 281 is not allocated.												
B	Identified in Form 1 as being only transmission related.												
C	Prepayments are the electric related prepayments booked to Account No. 165 and reported on Page 111, line 57 in the FERC Form 1, excluding any prepaid income taxes and prepaid pension assets.												
D	Line 35 excludes all Regulatory Commission Expenses itemized at 351.h, all advertising included in Account 930.1 (except safety, education or out-reach related advertising) and all EEI and EPRI dues and expenses Line 36 reflects all Regulatory Commission Expenses directly related to transmission service, RTO filings, or transmission siting itemized at 351.h												
E	Includes only FICA, unemployment, highway, property, gross receipts, and other assessments charged in the current year. Taxes related to income are excluded. Excludes other taxes associated with facilities leased to others that are charged to the lessee.												
F	The currently effective income tax rate, where FIT is the weighted average Federal income tax rate; SIT is the weighted average State income tax rate, and p = "the percentage of federal income tax deductible for state income taxes." If the utility is taxed in more than one state it must attach a work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce rate base, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.f) multiplied by (1/1-T) (page 3, line 26). <table border="0" style="margin-left: 20px;"> <tr> <td>Inputs Required:</td> <td>FIT =</td> <td style="text-align: right;">0.35</td> <td></td> </tr> <tr> <td></td> <td>SIT =</td> <td>-</td> <td>(SIT from Attach 4a, column (e), line 2)</td> </tr> <tr> <td></td> <td>p =</td> <td>-</td> <td>(p from Attach 4a, column (f), line 2)</td> </tr> </table>	Inputs Required:	FIT =	0.35			SIT =	-	(SIT from Attach 4a, column (e), line 2)		p =	-	(p from Attach 4a, column (f), line 2)
Inputs Required:	FIT =	0.35											
	SIT =	-	(SIT from Attach 4a, column (e), line 2)										
	p =	-	(p from Attach 4a, column (f), line 2)										
	For each Rate Year (including both Annual Projections and True-Up Adjustments) the statutory income tax rates utilized in the Formula Rate shall reflect the weighted average rates actually in effect during the Rate Year. For example, if the statutory tax rate is 10% from January 1 through June 30, and 5% from July 1 through December 31, such rates would be weighted 181/365 and 184/365, respectively, for a non-leap year.												
G	Reserved												
H	Removes dollar amount of transmission plant included in the development of OATT ancillary services rates and generation step-up facilities, which are deemed to be included in OATT ancillary services. For these purposes, generation step-up facilities are those facilities at a generator substation on which there is no through-flow when the generator is shut down.												
I	Reserved												
J	ROE will be supported in the original filing and no change in ROE may be made absent a filing with FERC under FPA Section 205 or 206.												
K	Reserved												
L	The regulatory assets will accrue carrying costs equal to the weighted cost of capital on line 82 until the formula rate is effective and the resulting charges are assessed to customers.												
M	Any plant leased to others will be removed from Plant In Service and booked to Leased Plant, Account 104. Expenses charged to the lessee will be booked to Account No. 413 and the accumulated depreciation associated with the leased plant shall not be included above on lines 9-11.												
N	Reserved												
O	Excludes TRBAA expenses.												
P	Excludes costs associated with Asset Retirement Obligations (ARO) absent a subsequent filing under FPA Section 205.												
Q	Reserved												
R	For rate projections, ADIT is computed using the average of the beginning of the year balance and a prorated end of the year balances as required by Section 1.167(l)-1(h)(6)(ii) of the IRS regulations. An annual true-up is calculated based on an average of the actual beginning of the year and end of the year balances. Attachment 6a calculates the projected ADIT balances based on the prorated ending ADIT balances as calculated on Attachment 6b. Attachment 6e to be used for actual balances during the true-up.												
S	Includes the amortization of any excess/deficient deferred income taxes resulting from changes to income tax laws, income tax rates (including changes in apportionment) and other actions taken by a taxing authority. Excess and deficient deferred income taxes will reduce or increase tax expense by the amount of the excess or deficiency multiplied by (1/1-T) (page 3, line 61a).												
T	Includes the annual income tax cost or benefits due to permanent differences or differences between the amounts of expenses or revenues recognized in one period for ratemaking purposes and the amounts recognized for income tax purposes which do not reverse in one or more other periods, including the cost of income taxes on (1) the Equity portion of Allowance for Other Funds Used During Construction and (2) meals and entertainment expenses. Permanent differences arising from lobbying and/or political contributions, or fines and penalties from government agencies will not be recovered through this mechanism. The recovery of any other permanent differences (which are expected to be extraordinary in nature) would be specifically identified in Attachment 2a. T multiplied by the amount of permanent differences and depreciation expense associated with Allowance for Other Funds Used During Construction is included in page 3, line 59b and will increase or decrease tax expense by the amount of the expense or benefit included on line 59b multiplied by (1/1-T) (page 3, line 61b).

Note 1 All revenues booked to Account 454 that are derived from cost items classified as transmission-related will be included as a revenue credit. All revenues booked to Account 456 that are derived from cost items classified as transmission-related, and are not derived from rates under this transmission formula rate will be included as a revenue credit. Work papers will be included to properly classify revenues booked to these accounts to the transmission function. A breakdown of all Account 454 revenues by subaccount will be provided below, and will be used to derive the proper calculation of revenue credits. A breakdown of all Account 456 revenues by subaccount and customer will be provided and tabulated below, and will be used to develop the proper calculation of revenue credits. All revenue credits that are included in the TRBAA are excluded here.

Note 2 If the facilities associated with the revenues are not included in the formula, the revenue is shown below, but not included in the total above and explained in the Attachment 3. This includes plant leased to others and the associated expenses outlined in Note M of Appendix III.

Note 3 All Account 454, 456, and 456.1 Revenues must be itemized below and tie to the FERC Form No. 1 cites set forth below

Note 4: The Discount in Column L is the reduction in revenue, if any, that the company agreed to, for instance, to be selected to build facilities as the result of a competitive process and equals the amount by which the annual revenue requirement is reduced from the ceiling rate. A workpaper will be provided to show the calculation of the discount.

Note 5: All O&M will be directly assigned to each project with plant in service based on the invoiced amount per project. The detail supporting the O&M direct assignment will be provided in a workpaper and the totals shown in a Form No. 1 footnote to pages 320-323.

A&G will be allocated in proportion to the Transmission O&M for each item in Lines 7 (not including amortization of Regulatory Asset(s) booked to Account 566).

Step 1 Lines 1-6 are sourced from Appendix III, Attachment 3 or calculated as set forth on each line.

Step 2 On lines 7, for each project (whether FERC authorized CWIP in rate base or plant in service), FERC authorized Abandoned Plant or FERC authorized Regulatory Asset, Input the data for Steps 3 to 7

Step 3 On lines 7, Col A, input the name of the project

Step 4 On lines 7, Col B, input the useful life for projects with plant in service based on the depreciation rates set forth in Attach 9, or the amortization period approved by FERC for Abandoned Plant or Regulatory Assets

Step 5 Lines 7, Col C, is the increase in ROE authorized by FERC from Note 3

Step 6 Lines 7, Col D, is the Base Fixed Charge Rate from line 5 which excludes any increased ROE authorized by FERC

Step 7 Lines 7, Col E, calculate the Fixed Rate Charge for the line including the increased ROE authorized by FERC

Step 8 On Lines 7, Col F, input the 13 month balance of each Investment (defined in Note 2 as Regulatory Assets, Abandoned Plant, authorized CWIP in rate base, and plant in-service). The total on line 8 must tie to line 4.

Step 9 On Lines 7, Col G, input the depreciation or amortization expense associated with each investment and the total on line 8 must tie to the sum of Appendix III, lines 33b, 40 & 42, col 5

Step 10 On Lines 7, Col H, input the O&M from Note 5, Col E for each project with plant in service.

Step 11 Lines 7, Col I, calculates the revenue requirement at the Base FCR for each Investment as the sum of Cols D, F, G and H

Step 12 Lines 7, Col J, calculates the revenue requirement for each Investment including any increased ROE authorized by FERC as the sum of Cols E, F, G and H

Step 13 Lines 7, Col K, calculates the revenue related to any increased ROE authorized by FERC.

Step 14 On Lines 7, Col L, input the amount by which the transmission owner has committed to charge less than the rate in Col J, regardless of how that Discount is calculated. For each project, the amount of the Discount will be zero or a reduction to the annual

Step 15 Lines 7, Col M, calculates the revenue requirement attributable to each project to be charged customers as Col J less Col L.

Attachment 3 Attachment 3 calculates the increase in the Fixed Charge Rate attributable to an increase in ROE of 100 basis points. Lines 7, Col C inputs the actual increase in ROE authorized by FERC for the project. Lines 7, Col E compute the increase in the Fixed Charge

	Transmission facility Contributions in Aid of Construction	Note 1

Note 1: In the event a Contribution in Aid of Construction (CIAC) is made for a transmission facility, the transmission depreciation rates above will be weighted based on the relative amount of underlying plant booked to the accounts shown in lines 1-10 above, and the resultant weighted average depreciation rate will be used to determine the life over which to amortize the CIAC. The life of each facility subject to a CIAC will be estimated in this manner at the time the plant is placed into service, and will not change over the life of the CIAC without FERC approval. The combined amortization expense for all CIACs shall be the sum of each individual CIAC balance amortized over the life of each individual CIAC established in this manner.

Note 2: GWT's depreciation and amortization rates may not be changed absent a section 205 or 206 filing

Note 3: Electric Intangible Franchises and Transmission Land Rights are amortized over the life of the franchise agreement or land right.
